

A

AX Series

Digital temperature controller

- Multi input (K, J and Pt100 Ω are selectable)
- Multi output (Relay and SSR are selectable)
- High speed sampling cycle (0.1 sec)
- Installation depth : 63 mm
- Control loop break alarm (LBA)

Suffix code

Model	Code	Description
AX	<input type="checkbox"/> - <input type="checkbox"/> <input type="checkbox"/>	Digital temperature controller
Dimension	2	AX2 : 48 X 96 mm
	3	AX3 : 96 X 48 mm
	4	AX4 : 48 X 48 mm
	7	AX7 : 72 X 72 mm
	9	AX9 : 96 X 96 mm
Output selection	1	SSR + Relay1 + Relay2
	2	SSR + Relay1 + Relay2 + Relay3
	3	4 – 20 mA + Relay2
	4	4 – 20 mA + Relay2 + Relay3
		Relay or SSR as control output (selectable in operator setup mode)
		Current output as control output
Power supply voltage	A	100 – 240 V AC 50 / 60 Hz

* Relay output operates as control output, alarm output and LBA output depending on the internal parameter setting.

Specification

Input

Input selection	Multi input • Thermocouple : K, J, R, T (IEC) • RTD : Pt100 Ω (IEC)
Input sampling time	0.1 s
Input impedance	1 MΩ max
Allowable wiring resistance	10 Ω / 1wire max(RTD), but resistances among 3 wires should be same
Allowable input voltage	10 V DC max

Performance

Display accuracy	±0.3 % of FS ±1 digit (In case of R type, ±1.0 % of ±1 digit in the 0 ~ 600 °C range)
Insulation resistance	More than 20 MΩ, 500V DC for 1min (Primary terminal–Secondary terminal)
Dielectric strength	2300V AC 50/60Hz, for 1 min (Primary terminal–Secondary terminal)

Range and input code

Classification	Code	Input type	Range	
			Celsius(°C)	Fahrenheit(°F)
Thermocouple	ℓ1	K	-100 ~ 1200 °C	-148 ~ 2192 °F
	ℓ2		-100.0 ~ 500.0 °C	-148 ~ 932 °F
	ℓ	J	-100.0 ~ 500.0 °C	-148 ~ 932 °F
	r	R	0 ~ 1700 °C	32 ~ 3092 °F
	ℓ	T	-100.0 ~ 400.0 °C	-148 ~ 752 °F
RTD	Pℓ	Pt 100 Ω	-100.0 ~ 400.0 °C	-148.0 ~ 752.0 °F

Control function and output

Control type	PID control, P control, ON/OFF control	
Auto-tuning	PID operation by the auto-tuning	
ON/OFF control	When PV > SV, it generates 0 % output. When PV < SV, it generates 100 % output. (Only when control hysteresis is 0)	
Manual reset	Users set within the range from 0 % to 100 %	
Control output operation	Direct action/Reverse action (selected by the parameter setting)	
Control output	Relay output/voltage pulse output (SSR output) * Selected by the parameter setting)	
Relay	1a contact (Resistive load)	
	Relay output can be selected maximum 3 and relay control output is displayed as RLY1. Alarm output 2 contacts (AL1, AL2) and LBA output are assigned by the users among RLY1, RLY2 and RLY3	
SSR	CYC	12 – 15 V DC pulse voltage (Resistive load min 600 Ω)
	PHA	
4 – 20 mA	Accuracy : 0.5 % of FS, Ripple Vp-p : 0.3 % of FS, Resistive load : Max 600 Ω	

Specification

Model	AX2	AX3	AX4	AX7	AX9
Power supply voltage	100 – 240 V AC 50/60 Hz				
Voltage fluctuation	±10 % of power supply voltage				
Power consumption	5.5 VA max				
Ambient temperature	-5 ~ 50 °C				
Ambient humidity	35 ~ 85 % RH (But without dew condensation)				
Vibration (resistance)	10 – 55 Hz, 0.75 mm, X Y Z each in X, Y and Z directions for 2 hour				
Shock (resistance)	300 m/s ² to 6 directions each 3 times				
Weight	320 g	320 g	180 g	300 g	400 g

※ Weight included the weight of box

Function and name of each part

No	Model		Description
①	Process value (PV)		• Display the current temperature in the operation screen
②	Set value (SV)		• Display the set temperature in the operation screen
③		Up Key	• Change the operation screen, increase the set value, move to the parameter setting mode
④		Down Key	• Decrease the set value, move to the parameter setting mode
⑤		Shift Key	• Shift to the set value digits • Move from operation screen – users • Move from operator – setting mode
⑥		Mode Key	• Move from operation screen – users • Move from operator – setting mode
⑦		Operation indicators	• Light ON with the PID auto tuning
			• Light ON with the control output operation
			• Light ON with the Alarm1 operation
			• Light ON with the Alarm2 operation
			• Light ON with the Loop break alarm operation

🔗 Important function explanation

■ Heating / Cooling output action selection

Able to select the reverse action (heating control) or direct action (cooling control) output by the $Ctrl$ parameter

■ PID auto tuning (A.T) function

Auto tuning function measures, computes and sets the optimum PID or ARW constant automatically. After supplying power in and while temperature is increasing, press the set key $MODE$ and \blacktriangle key synchronously for 2 sec. to begin the auto tuning. When auto tuning is finished, tuning operation will be ended automatically.

■ ON/OFF control setting method

Usually temperature controller performs the temperature control by "PID control method" which is done by the PI auto tuning. However, ON/OFF control method is used when controlling the refrigerator, fan, solenoid valve and etc. When users want to set the temperature controller as ON/OFF control mode, set the setting value of proportional band as $Ctrl$ within the "general setting parameter." Here, HYS (hysteresis) parameter will be displayed. Prevent such action to occur by setting the desired ON/OFF action range.

■ $boUt$ display

When input break (sensor break) occurs or exceeds the maximum temperature range, $boUt$ will be displayed in the measured value displaying unit.

■ Output terminal and output signal

• RLY signal allocation

AX Series has maximum 3 relay contact output. These 3 relay contact outputs are called as RLY1 to RLY3. Please refer to the connection diagram for the terminal position. The control signal and alarm signal are generated from the RLY1. Selecting the RLY in the $oCtrl$ parameter will yield the control signal in the RLY1. Selecting the $S5r$ in the $oCtrl$ parameter will able users to select the alarm signal and make the output. Users can select the alarm signal and make the output in the RLY2 and RLY3.

■ Alarm

• Using the alarm

AX Series supports 2 independent alarms (AL1 and AL2). These alarms can allocate AL1 or AL2 signal in the RLY1, RLY2 and RLY3 and be used. If alarm signal is not allocated in the RLY1 to RLY3 then the menu related to the alarm will not be displayed.

• Alarm hold action

If there is no standby action function, supply the power in then the LOW alarm will become ON while temperature is increasing.

In order to prevent the low alarm to become ON during temperature is increasing, add the standby action function so from the point when supplying in the power to until the value goes beyond the set value, it can prevent the low alarm to be operated.

Not using the alarm standby mode
(An.HD=OFF)

Using the alarm standby mode
(An.HD=ON)

• Alarm output LOCK

If the $RnoH$ value is ON, Alarm is not cancelled even if it becomes the alarm cancel condition.

If users want to stop the alarm forcedly, please press the \blacktriangle key for approx 2 sec.

■ LBA (Loop Break Alarm)

LBA function starts to measure time from the moment when the PID computed value becomes 0 % or 100 %. Also, from this point, this function detects heater break, sensor break manipulator malfunction and etc by comparing the changed amount of measured value in each set time. Also, it can set the LBA dead band in order to prevent any malfunction to happen in the normal control loop.

① When control output value which obtained by PID operation is 100 %,

If the temperature does increase more than LbR_U value within the LBA set time, LBA output will become ON

② When control output value which obtained by PID operation is 0 %,

If the temperature does decrease more than LbR_L value within the LBA set time, LBA output will become ON

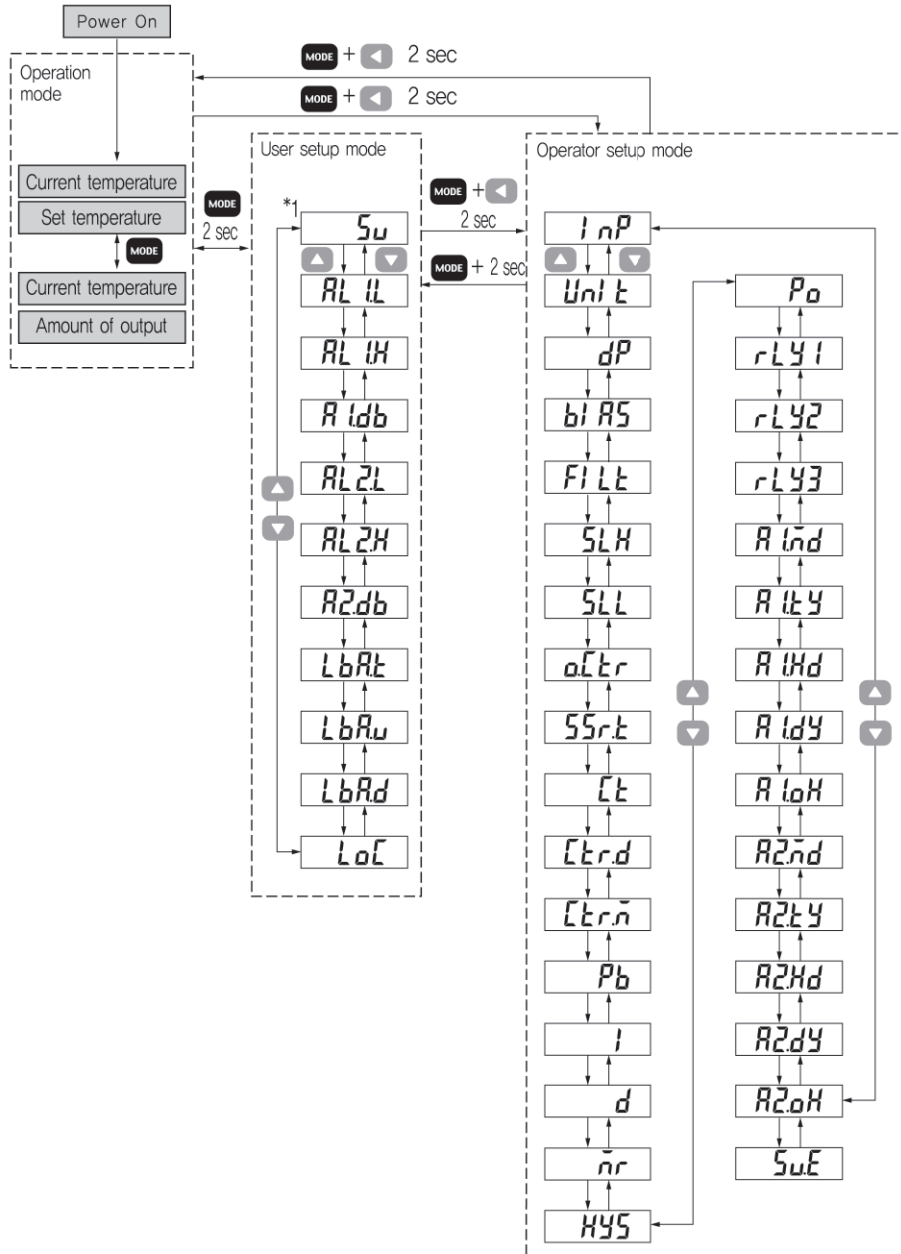

■ Time share cycle control and phase control of Voltage pulse output

When selecting the control output type as SSR, users will be able to select the types for voltage pulse output. The timeshare cycle control turns ON/OFF the output by proportioning the certain time to an output amount in cycle. Set the cycle of control output in the Lt parameter.

Within the half cycle of power wave shape, the phase control (depending on an output amount) controls an output amount by computing the output ON phase. However, when using the phase control, users must use the RANDOM ON/OFF type SSR.

Control type	Load current with 50 % of output
Phase control	<p>The diagram shows a series of pulses. A horizontal line represents the AC line cycle. The pulses are shaded and their width is indicated as 50% of the AC line cycle. The period between the start of two pulses is labeled as the AC LINE cycle.</p>
Timeshare cycle control	<p>The diagram shows a pulse train. A horizontal line represents the control output cycle. The pulses are shaded and their width is indicated as 50% of the control output cycle. The period between the start of two pulses is labeled as the Control output cycle.</p>

Parameter composition

■ Operation mode

Supplying in the power after finish wiring will display the current temperature. Pressing the **MODE** key will display the set temperature and output amount alternatively on the set value (SV) displaying unit.

■ User setup mode

User setup mode is the setting mode that sets the set value that is changed by users frequently such as alarm set value and loop break alarm (LBA). It made the parameter of user setup mode to be displayed on the operator setup mode that allows users to set easily (divided the setting level).

■ SV setting

- ① In Operator Setup Mode, When the value of **5uE** parameter is **on**, you can change the value with **◀, ▼, ▲** and press the **MODE** key to set up.
- ② In operator Setup Mode, When the value of **5uE** is **oFF**, you can change the value in **5u** parameter with **◀, ▼, ▲** and Press **MODE** key to set up.

Symbol (PV)	Lists	Description	Display condition	Default value
5u	set temperature	EU 0 ~ 100 %	at all times	EU 0 %
AL 1L	Alarm 1 low value	EU 0 ~ 100 % or EUS 0 ~ 100 % (temperature unit)	When RLYn ALn is set	EU 0 %
AL 1H	Alarm 1 high value			EU 100 %
A 1db	Alarm 1 dead zone			EUS 0 %
AL 2L	Alarm 2 low value			EU 0 %
AL 2H	Alarm 2 high value			EU 100 %
A 2db	Alarm 2 dead zone			EUS 0 %
LbAt	Loop break alarm time	0 ~ 7200 sec	When LBA is set in the RLYn	480
LbAu	Loop break alarm temperature	0 ~ 100 °C (°F)		2
LbAd	Loop break alarm dead zone	0 ~ 100 °C (°F)		2
LoC	KEY lock	0 : NO LOCK function	at all times	0
		1 : Operator setup mode LOCK, Auto-tuning prohibited		
		2 : Operator and user setup mode LOCK		

■ Operator setup mode

Operator setup mode is the setting mode that sets the specification of temperature controller when engineer installs it for the first time. Pressing the **MODE** key and **◀** key synchronously in the operation screen or user setup mode will enter into the operator setup **MODE** and **◀** keys one more time for 2 sec will return to the operation screen.

Symbol (PV)	Lists	Description	Display condition	Default value
INP	Input condition	K1 : K thermocouple (Not display the decimal points) K2 : K thermocouple (Displays the decimal points) J : J thermocouple R : R thermocouple T : T thermocouple Pt : RTD Pt 100 Ω	At all times	K1
Unit	Temperature unit	°C / °F option	At all times	°C
DP	Decimal point	ON(YES) OFF(NO)	Select decimal point	on
BIAS	Input compensation	-100 ~ 100(sensor input value + BIAS)	At all times	0
FILT	Input filter time	0 ~ 120 sec	At all times	0
SLH	High setting limitation	EU 0 ~ 100 %	At all times	1200
SLL	Low setting limitation	EU 0 ~ 100 %	At all times	-100
OUT	Control output type	SSR : SSR operating voltage pulse output RLY : Relay output	When output selection 1 or 2	SSR
SSRt	Voltage pulse output type	CYC : timeshare proportional control PHR : SSR phase control (continuously proportioning)	When selected SSR control output	CYC
Ct	Control output cycle	0 ~ 1000 sec	When SSRt is CYC or OUT is RLY	2
Ctrl	Control output action	rEu : Reverse action (heating control) dir : Direct action (cooling control)	At all times	rEu
Ctrl̄	Control type	PID : PID control P : P control (proportional control) onof : ON/OFF control	At all times	PID
Pb	Proportional band	1 (0.1) ~ EUS 100 %	When it is not ON/OFF	30
I	Integral time	0 ~ 3600 sec	Control/With PID control	240
d	Derivative time	0 ~ 3600 sec	With PID control	60
nr	Manual reset	0.0 ~ 100.0 %	With P control	500
HYS	Control hysteresis	EUS 0 ~ 100 %(Temperature unit)	With ON/OFF control	2
Pa	Output amount with input brea	0 ~ 100 %	At all times	00
RLY1	Relay 1 property	non : Not using AL1 : Alarm 1 output AL2 : Alarm 2 output LbA : LBA output	When output selection is 1 or 2 and OUT is not RLYY	non

Symbol (PV)	Lists	Description	Display condition	Default value
<i>rLY2</i>	Relay 2 property	<i>non</i> : Not using <i>AL1</i> : Alarm 1 output <i>AL2</i> : Alarm 2 output <i>LbA</i> : LBA output	At all times	<i>AL1</i>
<i>rLY3</i>	Relay 3 property	<i>non</i> : Not using <i>AL1</i> : Alarm 1 output <i>AL2</i> : Alarm 2 output <i>LbA</i> : LBA output	At all times (Option)	<i>AL2</i>
<i>A1nd</i>	Alarm 1 mode (Alarm 1 or 2)	<i>non</i> : Not using ---[: High alarm]--- : Low alarm	When AL1 or AL2 is set in RLY 1, 2, 3	---[
<i>A2nd</i>	Alarm 2 mode (Alarm 1 or 2)	-[-] : Alarm within range]-[-] : Alarm not within range]----
<i>A1tY</i>	Alarm 1 type	<i>AbS</i> : ABS(Absolute alarm)		<i>AbS</i>
<i>A2tY</i>	Alarm 2 type	<i>dEv</i> : DEV(Deviation alarm)		<i>AbS</i>
<i>A1Hd</i>	Alarm 1 standby mode	<i>oFF</i> : OFF(not using the standby mode)		<i>oFF</i>
<i>A2Hd</i>	Alarm 2 standby mode	<i>on</i> : ON(using the standby mode)		<i>oFF</i>
<i>A1dY</i>	Alarm 1 delay time	0 ~ 9999 sec		0
<i>A2dY</i>	Alarm 2 delay time			0
<i>A1oH</i>	Alarm 1 output LOCK	<i>oFF</i> : Alarm output return action		<i>oFF</i>
<i>A2oH</i>	Alarm 2 output LOCK	<i>on</i> : Alarm output maintain action		<i>oFF</i>
<i>SvE</i>	Change SV on the operation	<i>oFF</i> : No change SV <i>on</i> : Change SV	At all times	<i>on</i>
